ORG: Institute of Physical Energy, Obninsk, SSSR (Physikalisch-Energetisches Institut)
TITLE: Physical problems in the development of fast power reactors (Summarizing report) [Presented at a Conference on Reactor held in Budapest in 1965]

SOURCE: Kernenergie, v. 9, no. 9, 1966, 273-281

TOPIC TAGS: fast reactor, nuclear power reactor, nuclear reactor technology

ABSTRACT: The state of the developments in the theoretical and experimental physics of the fast energy reactors in the Soviet Union is reviewed. Work on the fast reactor BN-350 having a thermal power of 100 MW and an electric power of 350 MW has been recently initiated and its construction is expected to be completed by 1968--1969. The physical and technological feasibility of a fast reactor having an electric power of 1000 MW is being studied at the present. The experimental reactor BOR has been developed for the study of operational characteristics of high temperature and high pressure reactors. In a general way the review covers the following sub-group calculations:

ACC NR: AP7000905

operations; 2. experimental study of the physics of fast reactors, which include large scale experiments on critical systems, exponential experiments, heterogeneous effects, Doppler effect; 3. problems encountered when determining the nuclear data for the physics of the reactor. The experimental work, especially the exponential experiments for fast neutrons, were performed at the Institute of Physical Energy (Physikalisch-Energetisches Institut) on the reactor BR-1. Orig. art. has: 2 tables and 3 figures.

AUTHOR: Lejsek K.

TITLE: Effect of X-rays on the formation of oxidation products in lipids of certain rat organs

PERIODICAL: Československá fysiologie, no.1, 1963, 67

TEXT: investigated in the formation of oxidation products in lipids of rats exposed to a dose of 600 r, using the thiobarbituric acid test (TBA). The author adopted a slightly modified Placer-Slabočová method (Čs.fisiol. 9, 1960, 562). Without incubation did not differ appreciably from those of the controls. After incubation for one hour at +37°C the TBA chromogenates showed considerably higher values than those of the controls of irradiated rats. This paper was presented at the plenar session of the J. E. Purkyně v Hradec Králové (Physiologické sekce společnosti J. E. Purkyně Society in Hradec Králové), October 3, 1962.

"The Influence of Diphosgene and of Anhydrides of N-Carboxy-amino Acids on Breathing of Mitochondrias."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb 66, pp 75-76

Abstract: The influence of diphosgene and of anhydrides of N-carboxyamino acids on the activity of succinate oxydase of mitochondrias of isolated rat liver was investigated. An addition of 0.137 mg of diphosgene in 0.015 ml of 96% ethanol added to 3 ml of a suspension of isolated mitochondria stopped their breathing. Similar addition of 0.1 mg of N-carboxyanhydride of vanillin had no influence on breathing. 2 Czech, 1 East German reference. Submitted at "16 Days of Physiology" at Kosice, 27 Sep, 65.

of Isolated Mitochondria in Livers of Rats of Different Ages After
Partial Hepatectomy."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb 66, pp 130-131

Abstract: Experiments conducted on 36 male rats aged 3 to 24
months are described. Partial hepatectomy resulted in an increase
of oxygen consumption, the succinate oxidase activity was
decreased. Older rats that underwent a removal of 65-70% of
the liver were able to modify their energy and material metab-
olism to such an extent that a nearly normal liver regeneration
took place. 1 Figure, 5 Western, 1 Czech reference. Submitted
at the Full Meeting of the Physiological Section of the Czecho-
slovak Medical Society of J.E.Purkyne at Hradec Kralove, 3 Sep 65.

"Non-esterified Fatty Acids in Blood Serum and the Lipolytic Activity of the Fatty Tissue after Partial Hepatectomy of Rats of Various Ages."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb 66, p 131

Abstract: 84 rats aged 3 to 24 months were used in the experiments. During the first 48 hours after the removal of 65-70% of the liver tissue, all rats showed an increase in the blood content of non-esterified fatty acids, increase in the lipolytic activity of the fatty tissue, and increase in the content of lipids in the liver. The content of the oxidation products of lipids in liver tissue kept decreasing. The rats were able to restore nearly normal regeneration function after the resection. 1 Figure, 3 Western, 4 Czech references. Submitted at the full Meeting of the Physiological Section of the Czechoslovak Medical Society of J.E.Purkyně at Hradec Kralove, 8 Sep 65.

AUTHOR: Leka, Milan

TITLE: Factors causing the destruction of plastics

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 2, 1962. 565, abstract
2P7 (Zast. mater., v. 8, no. 12, 1960, 567 - 571)

TEXT: The effect of elevated temperatures, light, O₂ and other oxidizing agents, some metals, water, mechanical load, and atomic radiation on the destruction of polyethylene, polystyrene, PVC plastics, polytetrafluoroethylene, polytrifluoro chloroethylene, polymethacrylates, polyisobutylene. [Abstracter's note: Complete translation.] ✓
